Fullstack/Backend Developer

Semen A. Fediukovich

Age:	23 years old
Birthday:	19 February 1999
Marital Status:	Married
Place of residence:	Tbilisi, Georgia

Phone number:	+995-511-195-385
Email:	yohimik@gmail.com
Github:	github.com/yohimik
LinkedIn:	www.linkedin.com/in/s-fedyukovich

Experience

Remote Front-end Developer
July 2021 — Present

Urban Sharing, Tbilisi, Georgia

Development and support web micromobility services working across Europe. Developing web service for new product from scratch (Next.js, Material UI, React, TypeScript, GraphQL, Docker, Google Cloud Platform). Presenting team results to the company. Planning sprints and creating tasks for Back-end developers.

Senior Full-stack Developer
August 2020 — February 2021

Fora Soft LLC., St Petersburg, Russia

Leading Washington video project management system development. Designing microservices architecture and database scheme. Choosing technology stack and development most part of the project. Reviewing and helping other developers.

Developing multi-threaded service for video render that cuts video into blocks and renders multiple resolutions parallel on multiple servers from cloud to cloud (without saving a local copy). Also processing other file types (documents, audio, images) to be able to preview them in browsers.

Deploying project using GitLab CI/CD and Docker Swarm. Integrating Docker Swarm with Amazon CloudWatch Logs and providing analytical data based on logs.

(React, Node.js, TypeScript, Amazon S3, Amazon CloudWatch, Multipart Upload, MongoDB, Material UI, Redis, Fast video rendering, ffmpeg, File processing, RabbitMQ, Next.js, Socket.IO)
Lectures about databases and message brokers (Neo4j and RabbitMQ).

Full-stack Developer
June 2019 — August 2020

Developing back-end and web admin part of E-learning iOS application, for students who want to earn on tutoring, following tasks from Senior Developer. Setting up media server Kurento for video calls and integrating payment system (Node.js, MySQL, Redis, WebRTC, Socket.IO, Next.js, React, Bootstrap). Deploying the project using GitHub Actions and Docker Compose.

Junior Back-end Developer
June 2018 — June 2019

Yumasoft Inc., St Petersburg, Russia
Development and support web POS system for restaurants and delivery services (C#, ASP.NET, HTTP, REST API, SOAP, MS SQL). Fixing small bugs and developing new features. Solving Point-in-Polygon problem on sphere for delivery zones.

Remote Web Developer
November 2017 — June 2018

Freelance, St Petersburg, Russia
Searching for orders and coding websites layouts according to design (HTML, CSS, JavaScript). Developing HTML parsers on Java. Fixing small design issues and filling stores databases in WordPress admin.

Education

Bachelors Degree
"Informatics and Computer Engineering"
2017 — 2022

ITMO University, St Petersburg, Russia
Graduation thesis "Web Service Lifecycle Automation".
Analyzing current git providers market and choosing the best one for automated DevOps.
Deploying a web service based on NodeJs using GitLab CI/CD and Docker Compose.
Setting up and configuring GitLab Runner on server using Docker.
Developing GitLab CI/CD pipelines using modern technologies based on Graph Theory.
Most of the university works listed here.

High School
"Mathematics and cybernetics"
2015 — 2017

Faddeev AG SPSU, St Petersburg, Russia

In the learning process was special attention to Mathematical Analysis, Combinatorics, Probability Theory, Complex Numbers, Graph theory, Computational Mathematics and Common Algorithms.
Figured out many coding exercises (Arbitrary-Precision Arithmetic, Graph Algorithms, Combinatorics, Functional integration and interpolation) using Java and C# programming languages (some of them listed here).
Calculating Pisano period using Java for big numbers as Mathematician project.
Taking competition in team and solo olympic programming.
Assembling simple robots and coding firmware using Arduino.
Developing OpenCV bot for Doom 2 as summer practical work.
One of the final problems was a C++ compiler written in the Java (cout, Variables, Conditionals).

Projects

2017 — 2019

As test task have developed multi-threaded archiver, that breaks file into multiple blocks and processes them parallel.
Also developed other tasks that can be found in my GutHub repository.
Learning Unity game engine and coding simple games that also listed in my GitHub repository.
Took part in VK Hackathon in 2018 and 2019. Both times were close to victory, but we were not able to present projects well.

2015 — 2017

Continue learning Microsoft XNA framework and coding games (Tetris and Snake) at not interesting school lessons (was yearning to coding).
First time trying to work as freelance developer and receive an order for developing Minecraft Server Bucket plugin using Java.
The order was successfully completed.

2013 — 2015	Learning BASIC at school and solving simple coding exercises with arrays and loops. Continue setting up servers for friends in any games. Learning C# from books and coding simple Windows Forms games (Tic-tac-toe and Clicker). Learning Microsoft XNA framework and coding simple game fragments. Reading books about computer networks and protocols.
2011 — 2013	Developing simple Pac-Man like games using GameMaker learning from Google and YouTube videos. Setting up servers for Minecraft, Half-Life and Count-Strike at home for whole class in school. Learning Java copying code from videos. Learning basic Pascal and Delphi (variables, arrays, conditionals).

Skills

Common	English level Intermediate or B1, teamwork, perseverance.
Programming languages	JavaScript, Node.Js, Go, C#.
Layout	HTML, CSS, SASS, CSSinJS, Latex, Figma.
Storage	MySQL, PostgreSQL, Neo4j, MongoDB, Redis.
Deployment	Docker, GitLab CI/CD, Github Actions, Kubernetes.
Frameworks and libraries	React, Next.js, Material UI, Express, Socket.IO, Sequelize, Mongoose.
Protocols	HTTP, WebSocket, REST, GraphQL, TCP/UDP.
Other	RabbitMQ, GIT, Linux, ffmpeg, clean code, micro services, file processing, code review, Jira, Confluence, Slack.
